

SALESFORCE AGENTFORCE PROJECT

SwiftShip Tracker

A conversational AI agent for parcel booking, tracking and delivery updates

S.JAYASRI - A.KEVIN | ST.JOSEPHS COLLEGE ENGINEERING AND TECHNOLOGY | CSE DEPARTMENT FINAL YEAR

Problem and Objective

Customers face delays and confusion while booking, tracking and managing parcels. They call support or switch between multiple apps.

Book

Parcel booking with sender and receiver details

Track

Live status by Parcel ID through the AI agent

Manage

Delivery updates and automatic email alerts

Users and Key Needs

User	What they need
Customer / Sender	Book parcels, track deliveries, get real-time updates
Delivery Agent	Update status: Booked, In Transit, Out for Delivery, Delivered
Support Team	Resolve delivery issues using Cases and parcel details
Admin	Manage roles, security, reports and dashboards

Data Model

Parcel__c

Parcel ID, status, weight, estimated delivery date

Delivery__c

Current location, delivery status, linked parcel

Sender__c

Address, contact number, email

Receiver__c

Address, contact, email for delivery confirmation

Parcel is linked to Sender, Receiver and Delivery records.

Key Features

- Parcel-details retrieval through Salesforce configuration
- Preview/testing environment to validate responses
- Can be extended with additional actions and business rules
- Agent topics/instructions guide the conversation

How the Agent Works

1. User asks about a parcel or shipment.
2. Agent identifies the required information.
3. Agent uses the configured topic/action or Salesforce data source.
4. Parcel details are retrieved.
5. Agent gives a clear response to the user.

Example: tracking/status, parcel information, or delivery-related details.

THANK YOU
